

DRONE VOLT

Exhibits at the CES in Las Vegas

Villepinte - France, January 8, 2018

DRONE VOLT, announces that it will be participating, for the second time, at the CES Show in Las Vegas which opens its doors this Tuesday, January 9, 2018. The French manufacturer of industrial civil drones will be exhibiting with its American partner STAMPEDE. (Booth n°26009 - TECH EAST – LVCC SOUTH HALL 2).

In April 2017, DRONE VOLT signed a distribution contract in the United States with STAMPEDE. STAMPEDE is one of North America's largest professional distribution groups with 4 logistics platforms across the country and 14,000 direct customers and resellers. DRONE VOLT can thus rely on this important salesforce to address professionals in key industries, particularly in the fields of security and civil engineering, with its "scalable" solutions based on professional drones designed in Europe, Netherlands and France.

For the second time at the CES Show, DRONE VOLT made the strategic decision to exhibit on the stand of one of its most powerful trading partners. This will ensure excellent exposure while significantly reducing the budget. The resulting savings, estimated at around €100,000, are part of the cost control policy aimed at achieving profitability.

In the spotlight, the Altura Zenith and its Pensar camera as well as the Hercules 10 Spray

DRONE VOLT will be exhibiting all its latest innovations, the Altura Zenith, the "intelligent" Pensar Camera, the Hercules 10 in spray version as well as the Janus 360 VR, a drone dedicated to virtual reality.

DRONE VOLT will be exhibiting its Zenith surveillance platform, developed by AERIALTRONICS, a Dutch UAV designer whose main assets were acquired by DRONE VOLT in September 2017.

The Altura Zenith UAV is equipped with the Pensar camera driven by Artificial Intelligence, the world's first dual-spectrum digital vision platform dedicated to real-time data analysis using an embedded processor with 1.5 terabyte FLOPS of power. This camera is especially adapted to applications in surveillance, public security and counterterrorism.

Launched in January 2017 at the CES in LAS VEGAS, the HERCULES 10 SPRAY UAV is a professional device for spraying liquid products in the construction industry. It allows the treatment of difficult or dangerous surfaces. It can be quickly implemented in just a few minutes, reducing the equipment deployment and the human risk associated with high-rise operations.

This UAV is available in two versions: SPRAY Captive and SPRAY Autonomous. It is designed and manufactured in the DRONE VOLT FACTORY in Villepinte, in the Paris area (France).

The HERCULES 10 SPRAY UAV received a *Silver Innovation Award* from the Grand Jury of the 2017 Mondial du Bâtiment Innovation Competition in the category "Construction materials, tools and equipment".
