

## DRONE VOLT

---

### New products presented at EUROSATORY

---

Villepinte, June 11, 2018

**DRONE VOLT, a French aeronautics manufacturer specializing in professional civilian drones, is presenting its new HERCULES 2 and the latest technological innovations in its security and surveillance product line at EUROSATORY from June 11 to June 15, 2018. The group is present at Stand J801 – HALL 5A.**

Recognized by Defense and Security industry players and selected by the French Army for the supply of high value-added drones and training services<sup>1</sup>, DRONE VOLT is presenting its new solutions, including the HERCULES 2, at the EUROSATORY international exhibition. The latest versions of its emblematic models and its PENSAR intelligent camera developed for security and armed forces are also being presented.

#### Along the new products, spotlight on:

The **HERCULES 2**, a small, easily transportable drone weighing less than 2 kilos equipped with a very powerful camera. This drone allows 100% secured encrypted communications. With autonomy of around thirty minutes and a speed potentially reaching 90 km/h, this drone can fly in all weather conditions and resist winds of up to 70 km/h.

The **HELIPLANE**, in its pre-production version, is a VTOL (Vertical Take-Off and Landing) drone weighing 2.5 kilos. Easily transportable in a backpack, it is perfectly adapted to the needs of security forces and units on the ground.

The new **DV CONTROL** application allows all the products to be piloted from a tablet thanks to a simplified interface.

#### Zoom on new versions of emblematic solutions:

The **PENSAR camera**, piloted through artificial intelligence, offers dual spectrum digital vision for the real-time analysis of images or data.

The **HERCULES 5**, a drone linked by cable to a transformer, offers an optional telecommunications module with a 3G/4G modem. This system allows the real-time transmission of images and videos throughout the world using a telephone network.

The new version of the **HERCULES 10** offers greater autonomy totaling 40 minutes.

The second version of the **HERCULES 20** can carry a payload of 20 kilos and offers improved flight quality by limiting the effects of telecommunications interference.

The **ALTURA ZENITH (ATX8 version)**, developed by the group's Dutch subsidiary AERIALTRONICS, features a new flight controller.
