

DRONE VOLT

HERCULES 10 delivery in Canada

Villepinte, November 27, 2018

DRONE VOLT, a French aeronautics manufacturer specializing in professional civilian drones, has announced a new delivery to a government agency in Canada.

DRONE VOLT has been picked by the largest research organization in Canada for the supply of a HERCULES 10 drone. This research center, which specializes in industrial innovation and technological development, works on behalf of public bodies as well as numerous private companies. This center is notably mandated to test embedded drone modules (cameras, measurement devices etc.) and has in this regard chosen the HERCULES 10 for its next missions. The HERCULES drone, the product of the technological expertise and the DRONE VOLT R&D center in France, offers unmatched characteristics in terms of robustness, reliability, versatility and ease of use.

This research center should not stop here. It has already expressed interest in the highest payload model in the HERCULES line: the HERCULES 20 with a payload capacity of 20 kg.

“Yet another example of the endless possibilities offered by our solutions and the growing appetite of major customers”, indicated Olivier GUALDONI, the chairman / CEO of DRONE VOLT. “This contract will enable numerous Canadian industrial companies to test their embedded products on a HERCULES 10 drone and could result in new orders.”
