

DRONE VOLT

Delivery of five Hercules 10 drones in the United States

Villepinte, April 3, 2019

DRONE VOLT, an expert in onboard artificial intelligence and manufacturer of professional civilian drones, has announced the delivery of five Hercules 10 drones in the United States.

These five new Hercules 10 drones will be used for the inspection of high voltage lines and are part of an overall order that could reach over 60 units.

The inspection of high voltage lines has become a crucial issue for electrical energy suppliers. The use of drones allows the performance of missions that up until now have been assured by helicopters, which are less efficient, more expensive and more dangerous.

“The inspection of electrical transmission lines has become a major end market for DRONE VOLT,” stated Olivier Gualdoni, chairman / CEO of DRONE VOLT. “Our solutions are now being deployed in Europe, Asia and the United States and sales should continue to grow over the coming months.”

Next press release: Q1 2019 sales, April 15, 2019
