

DRONE VOLT

Anti-drone solutions tested at a European airport

Villepinte, May 16, 2019

DRONE VOLT, an expert in onboard artificial intelligence and manufacturer of professional civilian drones, has conducted a feasibility study of anti-drone solutions for a European airport.

DRONE VOLT was chosen by a major airport in Europe for a feasibility study involving anti-drone solutions. The group conducted tests under real-life conditions over several weeks. These tests could subsequently lead to the deployment of a global solution.

DRONE VOLT has placed anti-drone solutions at the heart of its strategy. Demand in this area is steadily rising and requires custom solutions.

“The fight against drones is a priority objective at all the airports worldwide, as delays caused by drone flights in prohibited areas result in considerable additional costs for airlines and airport managers,” indicated Olivier Gualdoni, chairman / CEO of DRONE VOLT. *“We expect to win new contracts in this area.”*
