

DRONE VOLT

Launch of the PENSAR SDK solution for the development of accessible and customized artificial intelligence applications

Villepinte, June 24, 2019

DRONE VOLT, an expert in onboard artificial intelligence and manufacturer of professional civilian drones, has announced the launch of its new complete professional solution PENSAR SDK (Software Development Kit), which allows the development and execution of customized artificial intelligence applications on mobile or onboard devices with real-time data processing.

This solution, made up of a PENSAR camera accompanied by its SDK, makes it easier for developers to create and deploy customized artificial intelligence applications for computer vision. Development that usually took several months in the past can now be completed in only a few days.

PENSAR SDK additionally eliminates dependence on the Cloud (Edge Computing) thanks to the camera's computing power and latency effects due to real time processing directly within the camera.

This solution is now highly accessible for major industrial groups, digital services companies, university research centers and consulting firms working in the digital transformation area etc.

"The DRONE VOLT group is entering into a new era with the launch of PENSAR SDK, which will boost even further our positioning as an expert in artificial intelligence," stated Olivier Gualdoni, chairman/CEO of DRONE VOLT. *"We are receiving expressions of interest from numerous industrial groups of all sizes. This is making us highly confident regarding our business in the future."*
