

DRONE VOLT

Contract with a Scandinavian airport for anti-drone solutions

Villepinte, July 4, 2019

DRONE VOLT, an expert in onboard artificial intelligence and manufacturer of professional civilian drones, has announced that it has won a bid tender launched by a Scandinavian airport for the supply of anti-drone solutions.

Following up a feasibility study announced last May, the DRONE VOLT group has announced that it has been chosen by a Scandinavian airport for the deployment of technologies for the detection of drones and their pilots. The goal of these technologies is to detect not only drones flying in prohibited, but also their pilots in order to enable rapid intervention.

This contract become fully effective in 2019 and represents a major step forward in anti-drone efforts that must be taken by all the world's airports.

"Drone flights in the neighborhood of airports represent a major threat for airport operators" indicated Olivier Gualdoni, chairman / CEO of DRONE VOLT. "These flights create risks for flight safety and substantial additional costs linked to traffic disruptions."
