

DRONE VOLT

Night and Beyond Visual Line of Sight (BVLOS) Successful with over 1,000 kms flown

Villepinte, 4th of February 2021

DRONE VOLT, embedded artificial intelligence expert and professional civil drone manufacturer, announces the great success of some fifty out-of-view flights coordinated by its subsidiary DRONE VOLT BENELUX within the framework of its contract with a major customer in Northern Europe operating in the industrial security sector announced on July 29, 2020.

Thanks to DRONE VOLT's cutting-edge technological expertise, its Benelux subsidiary has succeeded in carrying out these automatic, night and out of sight (BVLOS) flights over a total distance of 1,000 kilometers and an average distance of 20 kilometers per flight flown in only 19 minutes and without any incident.

These flights were used to carry out surveillance and observation missions all along railroads in often difficult weather conditions: very low temperatures (close to 0 degrees), thick fog, strong winds and fine precipitation.

Behind this feat, a resilient night vision camera with sharp night vision allows to clearly identify elements located on the course such as animals, people or vehicles.

DRONE VOLT thus confirms its unquestionable position in the strategic sector of surveillance of sensitive infrastructures by implementing an alternative solution that is infinitely more economical than the use of helicopters and therefore meets an important need for industrial security.

'These achievements are the fruit of our know-how and highlight our significant development potential, as we have been able to provide a perfect technological and economic response to important industrial needs,' says Benoît de Bruyn, CEO of DRONE VOLT BENELUX. "In this sense, the use of low-altitude helicopters at night in urban areas is virtually impossible, and the alternative of using UAVs is ten times less expensive, while the carbon footprint is virtually zero.'
