

DRONE VOLT

transports blood samples to Guinea

Villepinte, June 29, 2021

DRONE VOLT, expert in embedded artificial intelligence and manufacturer of professional civil drones, announces that it has demonstrated the relevance of its solutions in Guinea, in an urban environment, for the transport of blood samples.

DRONE VOLT announces that it has carried out a series of full-scale tests in Guinea with the aim of transporting blood samples to shorten the analysis time for HIV diagnostic tests for infants. In partnership with the NGO SOLTHIS and the Ministry of Health, DRONE VOLT has demonstrated the effectiveness of its drone transport solutions to address emergency situations requiring the transport of blood samples over several kilometers in a few minutes in Conakry, the country's capital, where road infrastructure and traffic congestion require the development of innovative transport approaches.

DRONE VOLT has received the agreement of the Guinean authorities and the special authorizations of the Civil Aviation Directorate for the realization of transports in real conditions and in automatic. The HERCULES 2 drone was able to demonstrate its efficiency not only by the speed of its launch, but also in its ability to transport in complete safety and with great precision products that can save lives.

'We are very proud to have participated in this project and to have demonstrated the effectiveness of our know-how,' said Marc Courcelle, CEO of DRONE VOLT. 'This type of application could be developed all over the world when an urgent need arises in areas that are difficult to access or in an urban context to alleviate road congestion.'

Next press release: First half 2021 revenues, Tuesday July 13, 2021
