

DRONE VOLT

announces an important step towards accelerating production rates in the United States

Villepinte, July 27th, 2021

DRONE VOLT, expert in embedded artificial intelligence and manufacturer of professional civilian drones, announces an important advance in the transmission of know-how in the United States.

Last week, DRONE VOLT received for the first time in its Villepinte factory a team of four American operators from AQUILINE DRONES who came to complete their training in the production of HERCULES 2 drones.

These operators, already trained by e-learning, have thus strengthened their skills and produced each step of a series of HERCULES 2 meeting the high standards of the professional drone sector under the surveillance of DRONE VOLT teams.

The flight tests carried out at the end of the week demonstrated the quality of the work carried out, which makes it possible to envisage an acceleration of the American production rate in the near future.

Under the license agreement signed in Q4 2020, AQUILINE DRONES pays monthly royalties indexed to production volume with guaranteed minimums. If the monthly production in the United States exceeds 250 UAVs, this would result in a significant increase in these royalties.

'These on-site trainings have clearly allowed the American teams to progress on every detail of the HERCULES 2 manufacturing process' says Marc Courcelle, CEO of DRONE VOLT. 'In addition, the presence of Barry Alexander, CEO of AQUILINE DRONES, allowed us to further strengthen the ties between our two companies.'
