
DRONE VOLT

revealed its DRONE VOLT KOBRA at the Milipol trade show

Villepinte, November 20, 2023

DRONE VOLT, manufacturer of professional civilian drones and expert in embedded solutions, presented its latest innovation at the Milipol trade show: the DRONE VOLT KOBRA.

European development and French manufacturing

Thanks to an ambitious acquisition strategy, DRONE VOLT has mastered a global ecosystem of drone expertise, from design to final data processing (R&D, software, manufacturing, maintenance, etc.).

The DRONE VOLT KOBRA, designed for the surveillance, security and inspection markets, combines the latest technologies (hardware and software) developed by the Group's teams. It is the ultimate multi-purpose vehicle, incorporating software and artificial intelligence solutions. The technologies acquired this year through the purchase of the assets of the Danish company Lorenz, enable the drone to be controlled remotely and to acquire and process data in flight.

The DRONE VOLT KOBRA was developed in conjunction with the DRONE VOLT group's four design offices, and is manufactured in France. It is an innovation based on 100% European technological solutions, which should give it a decisive advantage with police forces, armies, administrations and security forces.

DRONE VOLT KOBRA technical specifications

The DRONE VOLT KOBRA is equipped with an "AI ready" nanocomputer, allowing great flexibility and an infinite combination of configurations, adapted to each mission. It combines 4 strategic assets: Intelligence, Power, Modularity and Connectivity (IPMC).

The DRONE VOLT KOBRA is equipped with two on-board FPV (*first person view*) cameras and two LIDAR sensors. Its modularity facilitates integration of a wide range of payloads up to 5 kg.

Next press release: sales 2023, Wednesday January 17, 2024
