

DRONE VOLT

Sparks high interest with the LINEDRONE

Villepinte, February 20, 2024

DRONE VOLT, a manufacturer of professional civilian drones and expert in embedded solutions, has released an update on the commercial rollout of the LINEDRONE.

DRONE VOLT holds the exclusive worldwide industrialization and marketing rights for the LINEDRONE. Developed in partnership with Canada's Hydro-Québec Group, the LINEDRONE can be used to inspect high-voltage power lines - inspecting sleeves and conductor corrosion - to enable better asset maintenance without interrupting operations.

After delivering the first LINEDRONE units to its Canadian partner in the second half of 2023, DRONE VOLT has carried out the first demonstrations with various electricity transmission operators in Germany, Belgium, France, and Canada, with very conclusive results. In Brazil, DRONE VOLT is currently negotiating a partnership agreement to provide equipment and services for power grid inspection activities.

The Group points out that its strategy is based on providing services to operate the drone and delivering inspection reports to customers, based on the "Drone as a Service" model developed by DRONE VOLT EXPERT.

"Our demonstrations have already generated a lot of interest, and we are confident that we will be able to sign contracts that will contribute to our business from 2024," said Marc Courcelle, CEO of DRONE VOLT. "Our LINEDRONE is a highly innovative product with no equivalent on the market, and the service offer is an additional asset for customer solution adoption."

Next press release: Annual results 2023, Wednesday, March 20, 2024.
