

DRONE VOLT

Delivery of two HERCULES 20 UAVs to the French Navy

Villepinte, 3rd of May 2022

DRONE VOLT, expert in embedded artificial intelligence and manufacturer of professional civilian UAVs, announces that it has delivered two HERCULES 20 drones to the French Navy.

DRONE VOLT announces that it has delivered two HERCULES 20 to the French Navy and trained two expert pilots. This order is the result of a contract from the DMAé¹ (Direction de la maintenance aéronautique, a joint organization reporting to the Chief of Staff of the French Army).

The objective of the acquisition of two HERCULES 20 is to carry out an experiment on the transport of materials by means of two different tools: a winch or a dropper. The first one allows to deposit the materials on the ground, the second one to drop them.

At this stage, the various simulations suggest numerous sea-sea or ground-sea applications. DRONE VOLT hopes to deploy the HERCULES 20 soon on a larger scale with the French armed forces.

The Group points out that this type of solution has already been tested on offshore oil platforms, in the mountains and in other difficult-to-access locations.

'The French Navy's interest in our solution could have significant commercial repercussions,' says Marc Courcelle, CEO of DRONE VOLT. 'The HERCULES 20 has very few equivalents in the world. In particular, this drone is capable of supporting a large carrying capacity with a flight time that can exceed 30 minutes.'
