

DRONE VOLT

Strengthens its Presence in the United States with the HERCULES 20

Villepinte, march 13, 2025

DRONE VOLT, an expert in embedded artificial intelligence and a manufacturer of professional civilian drones, announces the imminent delivery of two previously announced orders (February 27, 2025) for its flagship model, the HERCULES 20, to its American customers.

Designed to meet the highest standards, this drone stands out for its exceptional capabilities in carrying heavy loads (15 kg / 44 lbs) and performing high-pressure cleaning operations (250 bar).

Growing Success in the United States

Already in operation for several years in the U.S., the **HERCULES 20** has become a benchmark in its sector. With dozens of units in use and no failures to date, this drone has proven to be highly reliable. Demand continues to grow, particularly for its **high-Dra** version, specialized in medium and high-pressure cleaning.

Thanks to its long battery life, high payload capacity, and resistance to headwinds and crosswinds, the **HERCULES 20** has become an essential tool for various industrial and strategic applications. Its certified version allows operation in urban and sensitive areas while ensuring optimal safety.

A Versatile Tool for Civilian and Military Applications

The HERCULES 20 excels in highly technical missions, including cleaning complex surfaces such as highway bridges and industrial chimneys over 100 meters high. It is also used for critical tasks like de-icing high-voltage power lines and wind turbine blades in extreme conditions. Additionally, it is employed in cable pulling operations for major energy companies and in military applications, including demining missions.

French Manufacturing for Global Export

DRONE VOLT's manufacturing facility, located in the Paris region, has the capacity to produce up to 100 units per month to meet growing demand. In recent months, deliveries of nearly 50 units at a time have been successfully completed. Each drone undergoes rigorous testing under extreme flight conditions to ensure flawless performance and safety.

A promising future

The growth outlook in the United States remains highly encouraging for DRONE VOLT. In 2025, the company aims to break its own delivery record (105 units in 2024) and further expand its presence in this strategic market. Thanks to the HERCULES 20, professionals can rely on a high-performance, reliable solution suited for the most demanding environments.

Videos of these missions are available on Drone Volt TV on YouTube.

Next Press Release : 2024 annual results – Wednesday, March 19, 2025.
